

Notification Service – API Documentation

1. Overview

Notification Service provides APIs for sending Email and SMS notifications. It supports direct delivery, queue-based asynchronous processing, message publishing, message consumption, and dashboard monitoring.

2. Base URL

Environment	URL
Development	N/A
Staging	https://train-ifms.wb.gov.in
Production	https://ifms.wb.gov.in

3. Mandatory Authentication

NOT REQUIRED

4. Email APIs

4.1. POST /api/Email/SendEmail

4.2. POST /api/Email/SendEmailUsingQueue

Sends or queues an email message.

****The Request Parameters and the Response is same for both the APIs**

Request Parameters (multipart/form-data)

Parameter Name	Data Type	Required	Description
To	string[]	Yes	Recipient email addresses
Cc	string[]	No	CC recipients
Bcc	string[]	No	BCC recipients
Subject	string	Yes	Email subject. (For reply mails do not change the Subject, keep it same as the previous mail)
Body	string	Yes	Email body
UploadedFiles	file[]	No	Email attachments
AddSignature	string	No	Append email signature. (If custom signature is required then pass the signature)

			HTML in string)
RequestId	string	No	Client request identifier
InReplyToMessageId	string	No	email message Id of immediate parent.
References	string	No	Email thread references (space separated message Ids of the entire mail thread in perfect order)

Response
